

# École Montessori

The goal of Montessori education is to cultivate your child's own desire to learn. Maria Montessori believed that no human being is educated by another person, but rather, your child experiences intense periods of learning based on the prepared environment and your child's interest combined with a capacity to learn.

"The hand is the chief teacher of the child," and so, learning is driven by hands-on, conceptual activities. As children grow, children will be able to move from a concrete understanding to abstract concepts. At École Montessori, we are grateful to be a part of your child's journey.

# We offer the P.E.A.C.E of Mind Promise

**Passion:** Our teachers' passion will inspire your child to become interested and excited about what they are learning.

**Enrichment:** Your child will be given the freedom and support to question, probe deeply, and make connections in all the academic avenues in the classroom. With a curriculum that exceeds provincial academic standards, your child will learn how to think critically, seek knowledge and understanding.

**Attention Advantage:** We maintain a small teacher to student ratio. Your child will receive the needed individualized attention in the classroom.

**Critical Thinking:** We educate the complete child and teach them how to think, learn, probe and seek answers.

**Empowerment:** We have created an environment where your son or daughter gains a sense of self. Your child will be a part of a culturally affirming environment that encourages them to seek where they fit in history, the present and the future.

## Casa (ages 3-6)

« Apprends-moi à faire seul(e) »

Our Casa program offers young children a friendly and inclusive environment that promotes discovery, concentration, and self-initiation. The Montessori environment provides sensory and motor experiences that lay the subconscious groundwork for developing academic skills, where children learn with hands-on activities designed to help them develop physically, socially, and intellectually. Our students become confident in their own abilities as they are naturally encouraged to persevere. Through activities and class environment, kids are able to achieve manageable goals, and correct their own mistakes.

## Lower Elementary (ages 6-9)

«La graine que nous semons est  
la graine de l'espérance.»

This is the age when the imagination develops, allowing children to understand and access what is not visible nor perceived by the senses. In the lower elementary program, children pass from concrete concepts to more abstract thought. The curriculum includes more advanced mathematical concepts, ample opportunity for writing, the use of basic research tools, and introduces the new ability to organize and present information. Students develop these new skills

in many areas, including language arts, math, science, geography, zoology, botany, health sciences, and art.

## Upper Elementary (ages 9-12)

«L'enfant est pour l'humanité à la fois un espoir et une promesse.»

Upper Elementary students are drawn to the outside world beyond their own community. They have been well prepared by their earlier experiences to approach a challenging curriculum of advanced ideas in literature, history, science, mathematics, and language. Students in this program not only focus on the acquisition of information but are also pushed to think and question the subject of their learning. At this level, students are given increasing opportunities to immerse in topics of interest and to carry out multi-layered research projects.

## Extra Curricular Activities

- Karate
- Knitting Club
- Soccer
- Chess Club
- Visual Art
- **Summer Camp**

Our highest dream is that every single child who passes through our school doors will be inspired and become so courageous to follow the highest calling on their lives. We desire that every student will dream impossible dreams and be so audacious as to know that they can achieve them.
