- Intermediate C# Sharpshooter
- Advanced C++ Haunted Harbour
- Advanced Java Android Mobile
- Advanced+ Java Minecraft Mod
- Elite C# Unity Endless Runner 3D Game
- Elite C++ RPG 2D Game Engine

Our Vision

Most kids love video games... Unfortunately, most of the time, they're playing games instead of doing things that could help their educational or professional development. But it doesn't have to be that way!

You can take your child's love of gaming and use it to introduce them to a real-world skill set that could have them prepared for employment straight out of school.

Programming is and will continue to be one of the single most important – and fastest-growing – careers of the 21st Century. Whether your child decides to make video games, program business apps, or train the next generation of AI, this is a field with endless room for creative workers who can excel.

Why Register

4 Student Maximum: Our online coding classes have a maximum of 4 students per instructor, allowing personalized care and instruction that is second to none.

Year-Round Classes: We operate summer online programming camps and weekly school season classes, which means the learning and the fun never stop!

Industry Standard Languages: Learn game industry-standard programming languages such as Python, Java, C#, C++ and Unity
